Roll No.: CLAIU4AID25100

Amrita Vishwa Vidyapeetham

Amrita School of Artificial Intelligence, Faridabad

B. Tech. Mid-Term Examinations – October 2025

First Semester

Artificial Intelligence & Data Science

19ENG111 Technical Communication

Duration: Two hours

Maximum: 50 Marks

Course Outcomes (COs):

CO	Course Outcomes
CO1	Learn the fundamentals of mechanics of writing.
CO2	Acquire the ability to draft formal correspondence and various technical documents.
CO3	Develop abilities in critical thinking and analysis.
CO4	Acquire skills of scanning for specific information, comprehension, and organization of ideas.
CO5	Enhance competency in technical presentation skills.

Answer all questions

SECTION- A (0.5× 20 = 10)

Questions Sl. No.	Question	Marks	CO	Blooms Taxonomy Level
Q1	**Correct the following sentences / Choose the right option:** a) Each of the students have submitted their assignments on time. b) The engineer along with his assistants were present at the site. c) Neither the students nor the teacher _____present. (a) are (b) were (c) is (d) have d) The data is not sufficient to draw any conclusion. e) The scientist explained the experiment ____detail. (a) in (b) on (c) at (d) by f) She did not knew how to operate the new software. g) The team discussed about the results in the meeting. h) The committee has given __recommendations to the company. (a) its (b) their (c) it's (d) there. i) The report was submitted in time, isn't it? j) The engineer succeeded __solving the technical issue.	10	CO1	L1

	(a) at (b) in (c) on (d) for k) The equipment were arranged in the laboratory. l) He is senior than me in this company. m) The manager has ordered for new computers. n) The measurements ___taken very carefully. (a) is (b) was (c) were (d) has been. o) One of my friend is working in the IT department. p) She gave me an advice: (a) gave me advice (b) gave me a piece of advice (c) gave me advices (d) no change. q) I prefer coffee than tea. (a) over (b) to (c) from (d) with r) He is looking forward to meet you. (a) to meeting you (b) to meets you (c) meeting you (d) no change s) The machine stopped to work suddenly. (a) stopped working (b) stopped for work (c) stopped by work (d) no change. t) The reason why he failed was because he didn't study. (a) that (b) for (c) no change (d) of			

SECTION-B (5 × 4 = 20)

Questions Sl. No.	Question	Marks	CO	Blooms Taxonomy Level
Q2	What are the differences between a letter and a report?	5	CO2	L2
Q3	What is an object description? Describe the key components and features of an effective object description with a suitable example.	5	CO2	L2
Q4	Write a short report (in proper format) on a technical workshop which you have attended recently.	5	CO2	L4
Q5	What is technical communication? How Is it different from general communication?	5	CO3	L4

SECTION C (10 × 2 = 20)

Questions Sl. No.	Question	Marks	CO	Blooms Taxonomy Level
Q6	Write an essay in about 300 words on the role of engineers in sustainable development.	10	CO3	L6
Q7	**Write a summary of the following passage in about 200 words** Artificial Intelligence (AI) is revolutionizing the entertainment industry,	10	CO2	L2

reshaping how content is created, distributed, and consumed. From personalized recommendations on platforms like Netflix and Spotify to AI-generated scripts, music, and artwork, the integration of AI is driving unprecedented innovation. It allows businesses to optimize workflows, engage audiences effectively, and enhance creative processes.

In gaming, AI powers immersive experiences, with realistic NPCs (non-playable characters) and adaptive environments. Meanwhile, in content marketing, AI tools analyse audience behaviour to craft targeted campaigns. The music and film industries are embracing AI for automating editing, dubbing, and even creating virtual actors. Artificial intelligence has become a creative partner in content production, driving efficiency and innovation across the entertainment industry. From scriptwriting to animation, AI is transforming how content is conceived and produced.

AI tools like OpenAI's GPT models and Sudowrite assist writers in generating scripts and narratives. These tools analyze existing data, genres, and character arcs to suggest plot ideas or even create dialogue. For example, AI can provide alternative endings, expand character development, or generate a complete script based on prompts. This capability not only enhances creativity but also accelerates the pre-production process by offering writers new perspectives and saving time.

AI-powered platforms like Amper Music and AIVA (Artificial Intelligence Virtual Artist) are revolutionizing music composition. These tools enable artists and content creators to generate custom background scores or full tracks with minimal effort. AI analyzes musical styles, genres, and emotional tones to create music that fits specific themes or moods. For example, AI-generated soundtracks are increasingly used in indie films, video games, and advertisements. Grammy-winning artists have also explored AI-assisted compositions to push creative boundaries, merging human artistry with machine precision.

In film production, AI has significantly enhanced visual effects (VFX) and animation. Tools like Adobe Sensei and NVIDIA's AI platforms simplify complex tasks like object tracking, motion capture, and rendering. AI algorithms can simulate realistic facial expressions, create lifelike environments, and generate CGI characters with unprecedented detail. For instance, AI was instrumental in de-aging actors in Marvel's blockbuster films and creating lifelike creatures in *The Lion King* remake. Animation studios also benefit from AI's ability to streamline workflows. By automating repetitive tasks like lip-syncing and frame interpolation, animators can focus on creative storytelling. AI-powered tools predict movement between frames, resulting in smoother animations while reducing production time and costs.

AI's role in content creation is not about replacing human creativity but enhancing it. By automating labor-intensive processes and offering innovative solutions, AI empowers creators to focus on storytelling and artistry, pushing the boundaries of what's possible in entertainment. Artificial intelligence is revolutionizing audience engagement and marketing in the entertainment industry by offering personalized experiences and targeted strategies.

AI empowers entertainment companies to create highly personalized advertising campaigns by analyzing vast amounts of audience data. Platforms like Facebook and Google Ads utilize AI to segment audiences based on demographics, behaviour, and interests. This allows marketers to deliver ads that resonate with specific users, increasing engagement and conversion rates. For example, AI-driven systems can recommend movie trailers to individuals who have previously searched for similar genres or suggest concert tickets to music lovers based on their streaming history. This precision reduces wasted ad spend while maximizing impact, making AI indispensable in advertising strategies.

AI-driven chatbots and virtual assistants have transformed how entertainment brands interact with their audiences on social media. AI also monitors social media trends and sentiment to refine marketing strategies. By analysing hashtags, comments, and shares, AI tools help marketers understand audience preferences and tailor content accordingly. AI-powered tools like Hootsuite Insights even suggest optimal posting times to maximize reach and engagement.

Through targeted advertising and social media interaction, AI enables entertainment companies to connect with their audiences more effectively. By delivering personalized experiences and fostering real-time engagement, AI ensures that marketing efforts not only capture attention but also build long-term loyalty.

Artificial intelligence has transformed the gaming industry by introducing dynamic and immersive experiences through procedural content generation and adaptive gameplay. Artificial Intelligence is undeniably reshaping the entertainment industry, driving innovation across content creation, audience engagement, and personalized experiences. From enhancing creativity through AI-powered tools to revolutionizing how audiences consume and interact with content, the impact of AI is profound and transformative. As the industry continues to evolve, it's crucial to address the ethical challenges associated with AI integration, such as intellectual property rights and bias in content generation. Striking a balance between technological advancements and responsible practices will ensure a sustainable future for entertainment. The journey of AI in entertainment is just beginning, promising exciting opportunities for creators and audiences alike.
